Batch 101

1. What information does this file record?
It records the time Room temperature, room number and status for the nursery

2. What kind of device do you think produced this file, and what in the data makes you think so?
A sensor or a id scanner

3. What identifies one record?
Time

4. How are the fields represented?
Time, date, room, person id and person type
5. How many records are there?
-40

6. What do you notice about how the device actually collects and stores data?

The device is monitoring for security reasons to keep the kids safe to make sure things like kidnapping don't happen so it wants to keep a. very detailed database on who is coming in and out of the nursery

7. What are the advantages and disadvantages of this data format?
advantage of this specific data format is that since it holds all of the data with dates and times stamps and backs up the information and disadvantage is that the data is altogether and it looks off

Feed 101
1. What information does this file record?
It keeps a record of newborn patients and their heart rate. Also the breathing rates along with the temperature that is inside the hospital.

2. What kind of device do you think produced this file, and what in the data makes you

The hospital database collects the data from a heart monitor and also a cardiorespiratory monitor that takes the readings and then send the data to the hospitals database to allow a paper trail of patients prior visits

3. What identifies as one record?
Date

4. How are the flelds represented?

Physical field

5. How many records are there?
1569 records

6. What do you notice about how the device actually collects and stores data?

After the data is collected the multi parameter, then begins to save it within the database. Then it reads the data to verify it after that it moves onto the next data.

7. What are the advantages and disadvantages of this data format?
The advantage of this specific data format is that it's significantly more organized than the other ones and it's not so close to the other day they said so Its less confusing
I could not find any disadvantages

Stream 101
1. What information does this file record?
It's collecting data every 30 minutes that the door opens and closes in. The nursery in it is also collecting the readings from the temperature in which room exactly opens up:

2. What kind of device do you think produced this file, and what in the data
A camera because the name of the file is stream 101

3. What identifies one record?
Door status

4. How are the fields represented?
Data field

5. How many records are there?
217

6. What do you notice about how the device actually collects and stores data?
The data is being captured from a camera like device from inside the nursery because it saves when the door opens and closes

7. What are the advantages and disadvantages of this data format?
Advantages it gives you all the information of the surroundings area room number the temperature the door status is and date and time and disadvantage is it doesn't inform you of who came in and out of the nursery
